N.051 OFFICE BUILDING OF BLAGNAC

OFFICE BLAGNAC 办公大楼

Architecture Office	Studio Bellecour Architects
Location	Toulouse, France
Photographer	Christophe Picci Balloide, Nicolas Bonel, Quentin Jeandel, Studio Bellecour, Denis Glikman

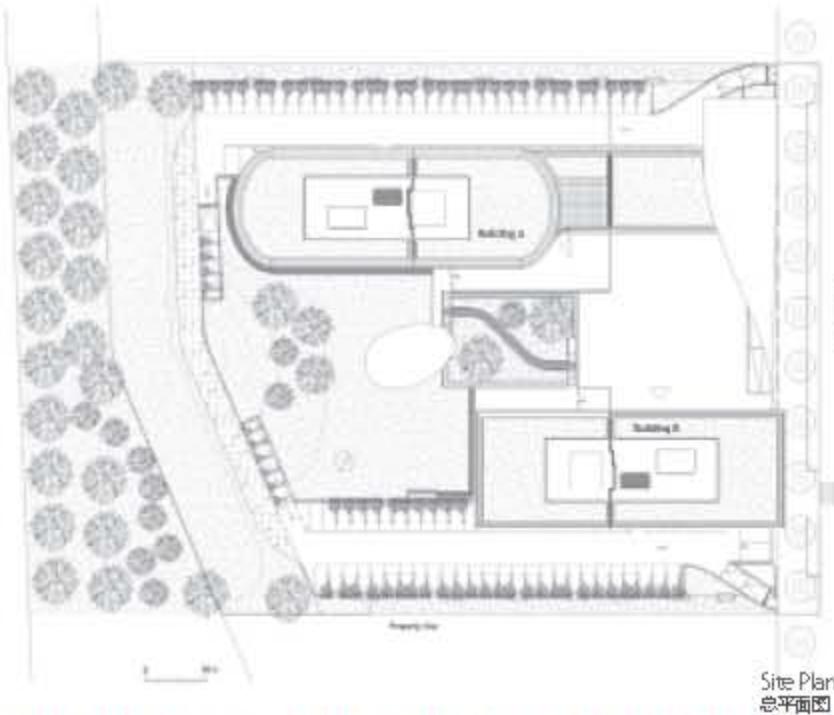

N SHAPE ANALYSIS 雕塑分析

Digital Shape

The building is connected by a white twisted ribbon. Twist gets a space dialogue between two buildings, and strengthens an overall combination. And the unique spiral shape makes a sharp and vertical contrast with the horizontal facade of the two buildings, echoing the parallel and adding a stereo feeling in architectural space.

数字造型

大楼被白色的扭曲飘带（扭带）连接起来。扭带搭建了空间的对话，加强了两栋楼整体的联合。且因为独特的螺旋形状与两栋大楼的横向排列立面形成了强烈的垂直对比，以及平行呼应，增添了建筑空间的立体感。

Site Plan
总平面图

N STRUCTURE AND MATERIAL 骨架与材料

Material: concrete, black basalt, aluminum sunshade box, green vegetation

材料：混凝土、黑色玄武岩、铝制遮阳框、绿色植被

Office Building of BLAGNAC is one of the debut projects realized in the UDV (Urban Development Zone), Andromède, Blagnac, near Toulouse in France.

The plan is centered on two distinct buildings which are connected by a long white concrete veil. The veil, the primary visual feature of the overall plan, blends vertical and horizontal motions as it slowly curves in a helical movement.

Two facades are covered with buildings wrapped in special insulating material and canopies. Around the building elevation in every floor is of orderly arrangement in between.

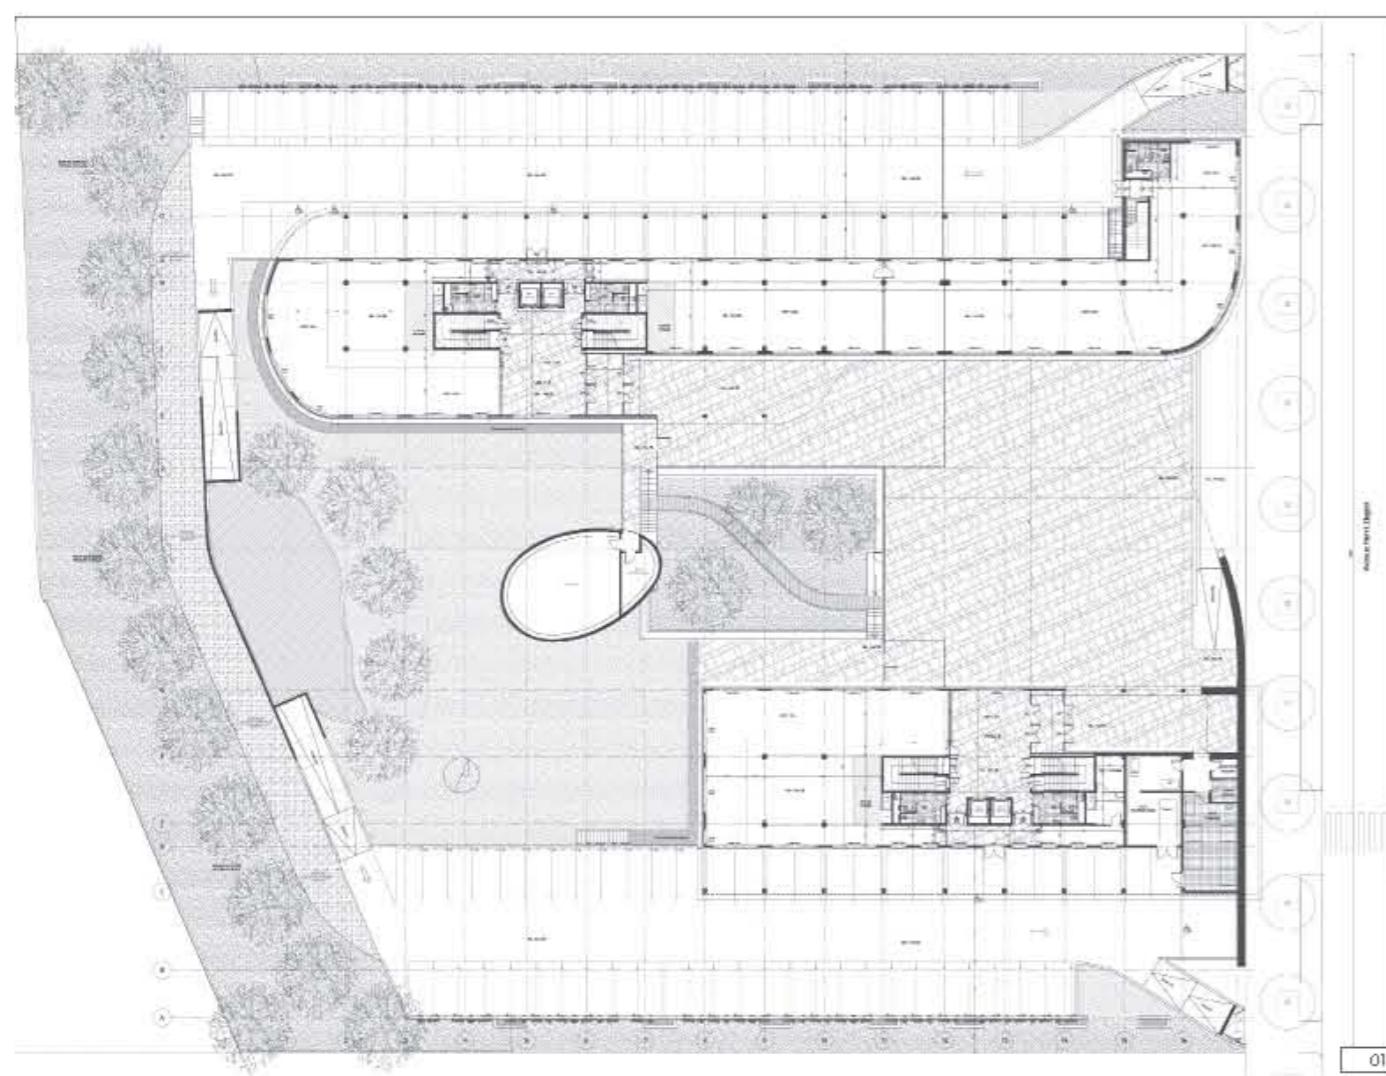

The difference between the shape and the resemblance of materials makes fraternal twins out of these two buildings, which works to maintain options for future users of the space. Parking lot is in the middle of the two buildings on the square.

BLAGNAC办公楼是法国图卢兹附近布拉尼亚克Andromède城市开发区（UDZ）首批建成的项目之一。

两栋独立的大楼由一条长长的白色混凝土带连接起来，如同一条纽带（纽带）。纽带在空间对话上完成了两栋楼整体的联合。这条纽带独特的螺旋形式与两栋大楼的横向排列立面形成了强烈的垂直对比和平行呼应。

两栋建筑的立面由特殊绝缘材料覆盖而成，绕建筑立面，在各楼层之间有序排列。

外形不同，材料相似，让两栋建筑看起来像是异卵双胞胎，为空间将来的使用者们提供了众多选择。停车场在两栋大楼中间的广场上。

N SKIN ANALYSIS 表皮分析

Transparent Skin

Special insulation materials covered on the facade of the complex, adhering to environmental regulations HEQ. Arc is around the building elevation, like in orderly arrangement between the floors, poses both good shading and daylighting, but without affecting inside and outside view.

透明表皮

两个建筑体的立面由特殊绝缘材料覆盖而成，符合HEQ（高品质环境质量）环境规范。弧线般围绕着建筑立面，在各个楼层之间有序地排列，既有良好的遮阳和采光，又不影响室内对外部的视线。
